- About

We created this blog to provide some basic info about our solar system, galaxies, some events like big bang and black hole and two space telescopes.

It is simple and easy to navigate. We have provided some links for further information. Some informational videos are also included to create better understanding.

All the information provided are taken from trusted sources like [nasa.gov](https://www.nasa.gov). We have tried our best to provide the accurate information.

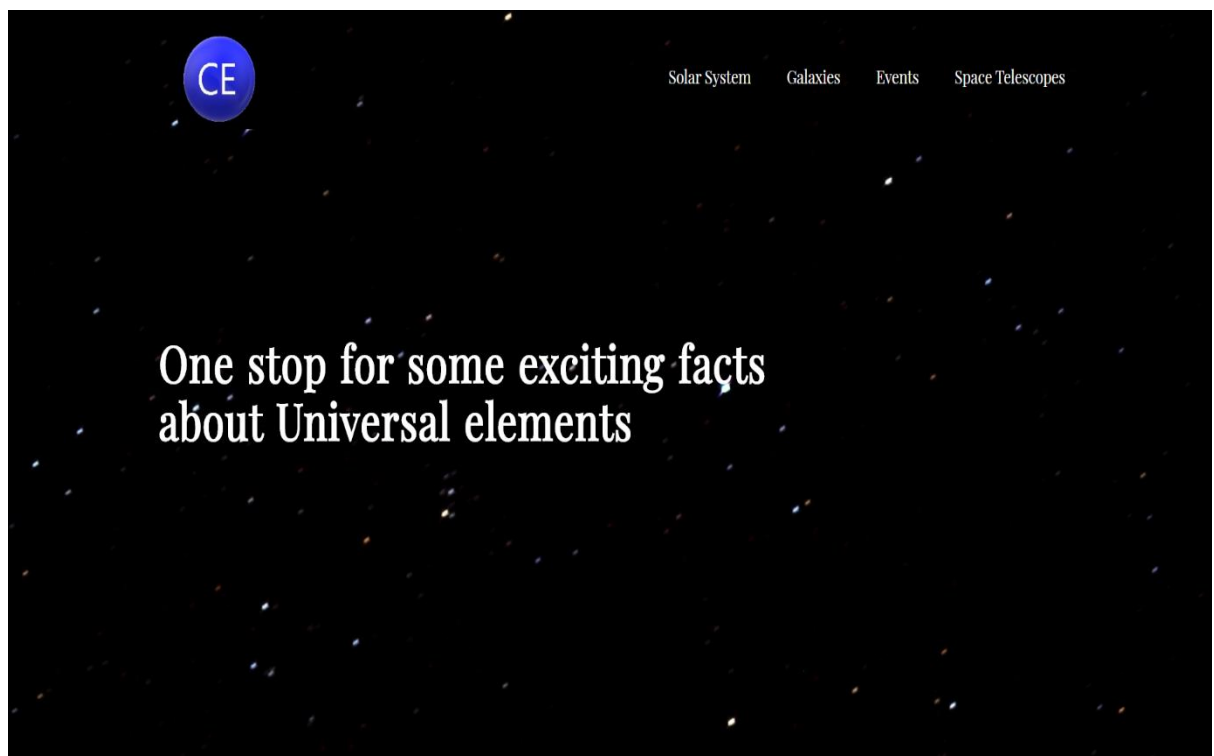

- Project purpose

1. To provide some basic information about some cosmic elements.

- Tools

1. Brackets
2. Google Chrome

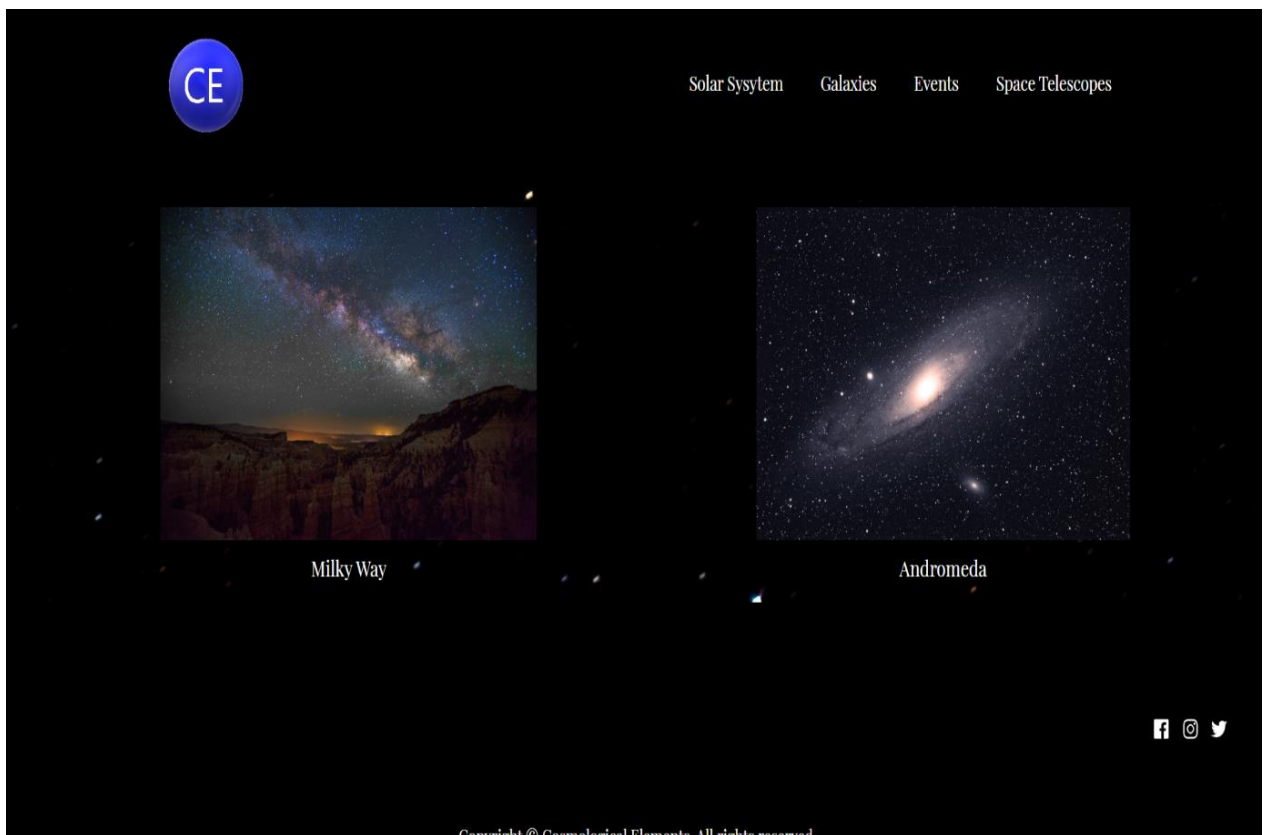

- Here are screen shots of the website:

Mars

Mars is the fourth planet from the Sun and the second-smallest planet with a thin atmosphere, having the surface features reminiscent both of the impact craters of the Moon, and the valleys, deserts and polar ice caps of Earth. It is the most widely searched planet for life

What is a Black Hole?

Hubble Space Telescope

From the dawn of humankind to a mere 400 years ago, all that we knew about our universe came through observations with the naked eye. Then Galileo turned his telescope toward the heavens in 1610. The world was in for an awakening.
